---

## Abstract

The relevance of this work is determined by introducing new standards of teaching foreign languages as well as the severization of requirements to the quality of Chinese language acquisition by the students of higher educational institutions. The goal of this paper is to study modern innovative methods and technologies of teaching and then use them in the teaching and learning activities, as well as to increase the students' motivation to learning Chinese. The leading approach to this problem is the problemthematic approach. The main material for the study was the following modern educational technologies: the project method, the debate method and the talk show technique. The key findings of the study are the systematization of the main mechanisms and principles of using modern educational technology at the classes of Chinese. The materials of this article may be helpful for school and university teachers of Chinese at the advanced level, as well as for educators and developers of educational materials.
